SUMMARY

Over **5+** years in analytics and data engineering across **insurance** and **entertainment** industries, specializing in building scalable data pipelines, upgrading legacy systems, and delivering key insights. Currently aiming to join a team to solve complex business challenges through data and cloud-based solutions.

PROFESSIONAL EXPERIENCE

Data Engineer,* Community Dreams Foundation, Remote, AZ** ***Jun 2025 – Present

- Designed and maintained end-to-end ETL pipelines ingesting structured recipe and batch monitoring data across **10+** tables into Postgres, applying schema validation and version-controlled migrations to ensure **zero**-downtime and data integrity.
- Delivered end-to-end data modeling for a Phase-2 relational schema across **9** tables with transactional batch-numbering, foreign key constraints, and targeted indexing, enabling full lineage traceability across **12** FDA-compliant worksheet outputs.
- Built a RAG-backed data enrichment layer using Claude and structured JSON vocabularies as the knowledge base, grounding food safety hazard extraction in curated domain knowledge and with reduced AI hallucination risks.
- Automated **50+** data quality validation rules in Python against JSON Schema definitions, catching structural regressions pre-deploy and enforcing vocabulary consistency across NLP, backend, and frontend consumption layers.

Data Analyst,* Plymouth Rock Assurance, Boston, MA** ***July 2024 – Jan 2025

(Collaborated with product and data science teams to modernize analytics workflows and deliver insights into home insurance claims and pricing using Python, AWS and Tableau)

- Migrated existing legacy SAS code to Python with a **90% reduction in runtime** and enhanced scalability on AWS.
- Processed more than **300 million rows** of home insurance vendor data on AWS Redshift and s3, using Python and Polars, saving **80% on cloud compute costs**.
- Orchestrated end-to-end ETL workflows with ECS Fargate and Step Functions that automated vendor data ingestion and improved **operational efficiency by 60%**.
- Created KPI dashboard in Tableau to track claims and underwriting metrics, allowing stakeholders and product teams to identify trends and analyze competitor premium pricing trends.

Senior Data Analyst*, Walt Disney Company (via Accenture), Bangalore, IN** ***Jun 2022 - Jan 2023

(Partnered with cross-functional teams to build scalable data and analytics solutions that enriched guest booking experiences and ensured seamless park operations for millions of Disney users)

- Conducted complex SQL based ad-hoc analysis on customer behavior across **six** Disney applications, consolidating over **5 million daily records** to provide actionable insights to business stakeholders.
- Developed event-driven data pipelines with AWS Event Bridge and Lambda to process real-time booking and system logs from AWS s3, enabling anomaly detection and quicker response to guest-impacting issues.
- Led a **cross-functional team of 8** to deliver a high-stakes booking engine on schedule, enabling Disney to handle record visitor volumes flawlessly.
- Implemented automated park-pass booking validation utilizing Python and SQL triggers, decreasing manual processes by **80%**.

Data Analyst,* Walt Disney Company (via Accenture), Bangalore, IN** ***Jan 2020 - May 2022

- Analysed data from nearly **half a million** booking records using SQL, to triage high priority requests, accelerating response times and elevating guest reservation experience.
- Built real-time dashboards to monitor peak load performance and ensuring **zero downtime** during crucial ticket booking periods.
- Integrated RDS data warehouse as a direct data source for Amazon QuickSight dashboards, boosting metric refresh speeds by **40%** to support faster executive decisions.
- Deployed CI/CD workflows on AWS, ensuring critical updates rolled out within **30 mins** post park-close, minimizing guest impact.

Data Analyst Intern,* Nuetech Steels, Bangalore, IN** ***Jan 2019 - Dec 2019

- Designed ETL processes with Python to extract steel sales data from multiple sources in s3, reducing **data handling time by 25%**.
- Constructed PowerBI dashboards with advanced DAX highlighting raw material supply trends and bettered forecasting of steel **demand by 20%**, supporting more accurate cost estimates.
- Optimized SQL queries and data models to analyze large-scale sales and inventory datasets, improving query performance and reducing **data retrieval time by 30**%, enabling faster insight generation.

TECHNICAL SKILLS

Languages and databases: Python, Java, MySQL, MS SQL, MongoDB (NoSQL), PostgreSQL, Google BigQuery
Tools and Libraries: Tableau, PowerBI, Jira, Git, MS Office Suite, Airflow, Splunk, Pandas, Polars, Matplotlib, NumPy, PySpark
Cloud Computing: AWS (S3, Glue, Athena, Sagemaker, RDS, Redshift, EMR, DynamoDB), GCP, Microsoft Azure, Snowflake

EDUCATION

Northeastern University, Boston, MA ***Jan 2023 - May 2025***
Master of Science in Data Analytics Engineering **3.9 / 4.0 GPA**
Courses: Database Management, Data Visualization, Machine Learning, Statistical Methods, MLOps, Data Warehousing

JSS Science and Technology University, Mysore, India ***Aug 2016 - Jun 2020***
Bachelor of Engineering
